## **Table of Contents**

### **Chapter 1. Soil Invasion Prevention**

1. Floors quickly track up

### **Chapter 2. Dry Floor Maintenance**

2. Dust-balls in corners
3. Black marks
4. Slippery floors
5. Remaining spots
6. Litter around chair legs

### **Chapter 3. Wet Floor Maintenance**

7. Chemical sensitivity
8. Spills and spots missed
9. Floors not cleaning up
10. Sticky floors
11. People walking on wet floors
12. Slip and fall incidents
13. Backaches from mopping
14. Skips when mopping
15. Streaks on floor
16. Water puddles, mop streaks, and water spots
17. Rust spots from chair legs

### **Chapter 4. High-Speed Burnishing and Spray Buffing**

18. Burnish pad wobbles
19. Burnish pad loads up
20. Circular swirls from burnishing
21. Machine damaging baseboards
22. Low gloss
23. Dull spots when finished
24. Dry buffing doesn't produce gloss

25. Burn marks
26. Burn marks do not buff out
27. Uneven burnisher gloss path
28. Spots not burnishing out
29. Several coats burnished, but still has a low shine
30. Red pad burns
31. Damage from propane buffing
32. Heavy scratches not burnishing out
33. Excessive powdering from burnishing

## **Chapter 5. Light and Heavy Scrubbing**

34. Scrub and recoat not restoring a good appearance
35. Floor cleaner producing inferior results
36. Inefficient floor cleaning system
37. Poor results with autoscrubber
38. Determining when more floor finish is required
39. Cleaner or slurry dried on the floor
40. Scrub and recoat taking too long
41. Autoscrubbing does not produce a clean and uniform appearance
42. Areas missed when autoscrubbing
43. Wet vac or autoscrubber not picking up all of the dirty solution
44. Choosing scrub pads for autoscrubber
45. Used burnish pads can serve as scrub pads

## **Chapter 6. Stripping**

46. People are falling on stripped floors
47. Stripping costs are rising
48. Floor finish is dull from mopping with strip mop
49. Stripper solution damaging adjacent areas
50. Stripper solution seeps out from under baseboards
51. Buildup along edges is difficult to remove
52. Stripper slurry is splashing onto baseboards and door jambs
53. Spent slurry dried on the floor
54. Spots and gray residue remain after stripping
55. Scratches from using a buildup removal pad
56. Unable to strip sealer
57. Stripping ½ of a hall leaves finish overlap
58. No-rinse stripper leaves a residue
59. Work moves too slowly

## **Chapter 7. Finish Application**

60. Poor blending match between the start and stop points
61. Floor finish slow to dry
62. Fans blow ripples in the finish
63. Swirl marks in the floor finish
64. Debris appearing underneath the finish
65. Unable to achieve the “wet look”

66. Finish is powdering
67. Finish is not uniform
68. Determining where the furniture goes
69. Laminate floor is unsightly
70. Floor finish is not holding up well
71. Floors do not display a depth of shine
72. Blemishes and discolorations show through the finish
73. Re-coating leaves an uneven appearance
74. Finish buildup from re-coating shows
75. Uneven ridges in the finish
76. Floor finish puddles in the low spots
77. Debris in blown-dry finish
